

Native Modules 101

The image shows the React Native Debugger web application running in a browser. The browser's address bar shows the URL `localhost:8081/debugger-ui/`. Below the address bar, there are two checkboxes: `Dark Theme` and `Maintain Priority`, both of which are unchecked. A paragraph of text states: "React Native JS code runs as a web worker inside this tab." Another paragraph says: "Press `⌘ ⇧ I` to open Developer Tools. Enable [Pause On Caught Exceptions](#) for a better debugging experience." A third paragraph mentions: "You may also install [the standalone version of React Developer Tools](#) to inspect the React component hierarchy, the Status: Debugger session #0 active." Below this text is a horizontal menu with tabs: `Elements`, `Console` (which is selected and underlined), `Sources`, `Network`, `Performance`, and `Memory`. Below the menu, there are icons for a play button, a no-interaction icon, and a dropdown menu showing `top`. To the right of the dropdown is a text input field labeled `Filter`. Further right is a dropdown menu labeled `Default levels` and a checkbox. The main area of the debugger shows a log of messages. The first message is `Console was cleared`. The second message is `Running application "wdi" with appParams: {"rootTag":21}. __DEV__ === true, development-level warning are ON, performance optimization`. The third message is `Sum is 3`, which is highlighted in blue. At the bottom left of the log, there is a blue arrow pointing to the right.

React Native Debugger

localhost:8081/debugger-ui/

☐ Dark Theme ☐ Maintain Priority

React Native JS code runs as a web worker inside this tab.

Press `⌘ ⇧ I` to open Developer Tools. Enable [Pause On Caught Exceptions](#) for a better debugging experience.

You may also install [the standalone version of React Developer Tools](#) to inspect the React component hierarchy, the Status: Debugger session #0 active.

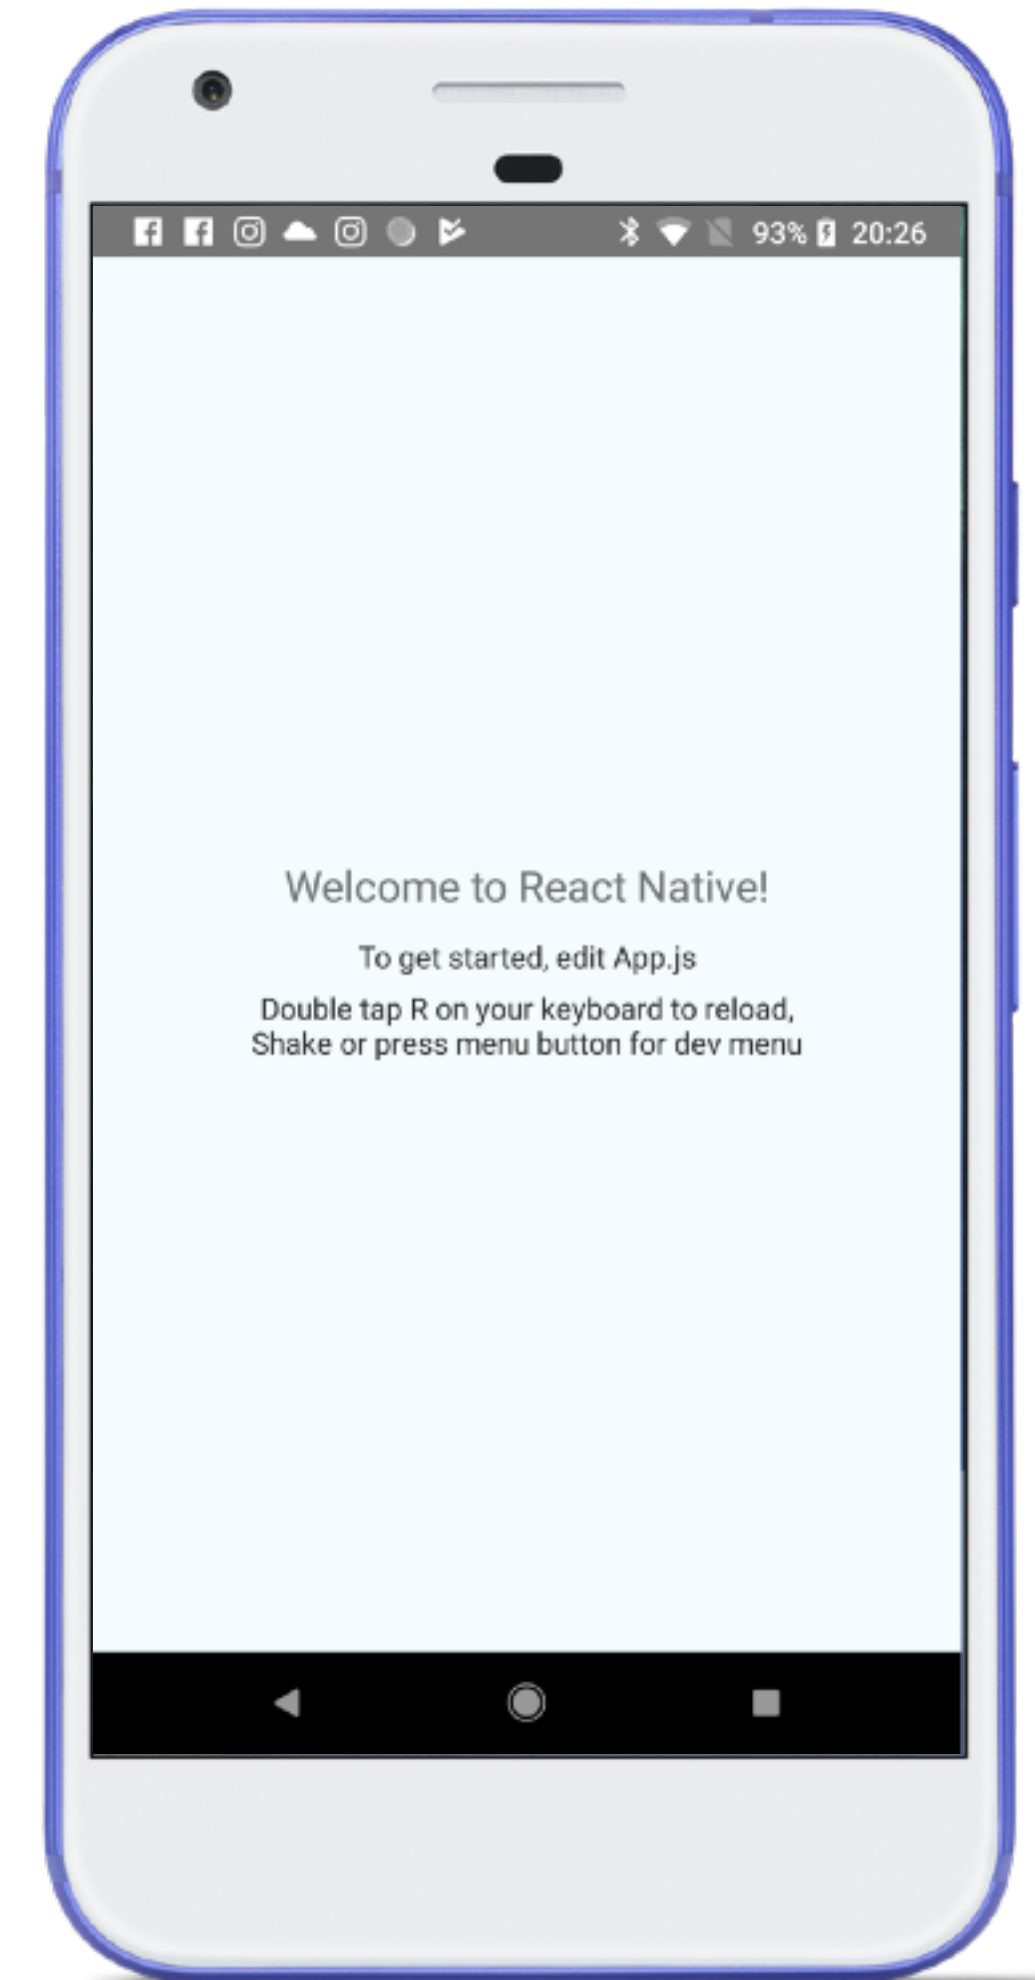

Elements Console Sources Network Performance Memory

top Filter Default levels

Console was cleared

Running application "wdi" with appParams: {"rootTag":21}. __DEV__ === true, development-level warning are ON, performance optimization

Sum is 3
