

# How does RN really work?

**JS VM**  
(async)

```
call('GWPAdPlacementView', 'initWithFrame',  
    [{x: 0, y: 0, width: 320, height: 240}])
```

**Bridge**  
(batch)

```
[{'GWPAdPlacementView', 'initWithFrame',  
    [{x: 0, y: 0, width: 320, height: 240}]]]
```

**Native**

```
[_bridge enqueueJSCall:@"GWPAdPlacementView.initWithFrame"  
    args:@[@{"x": @0, @"y": @0,  
            @"width": @320, @"height": @240}]]]
```

# How does RN really work?

- There is no WebView. Period. No CSS. Period. No HTML. Period.
- Everything you do via JavaScript goes from JS VM through React Native Bridge and is executed natively
- **Everything written in JavaScript is represented in native code**
