

Refactor hell

- Updating minor version bump is like moving from Swift 1 to 2 or from Java to Kotlin
- Only difference - you're doing it every month until you die.

Refactor hell

- Updating minor version bump is like moving from Swift 1 to 2 or from Java to Kotlin
- Only difference - you're doing it every month until you die.
- You might be left with an app, which after a while will be unmaintainable.
