SSR: getInitialProps

```
 5    import API from "../api";
 6
 7    export default class extends React.Component {
 8      static async getInitialProps({ req, res, query }) {
 9        var articles, page;
10
11        const api = new API();
12        page = parseInt(query.page || 1);
13        articles = await api.articles(page);
14
15        return { articles, page };
16      }
17
18      componentDidMount = () => {
19        if ("serviceWorker" in navigator) {
20          navigator.serviceWorker
21            .register("/service-worker.js")
22            .then(registration => {
23              console.log("service worker registration successful");
24            })
25            .catch(err => {
26              console.warn("service worker registration failed", err.message);
```

API

```js
export default class API {
  static HOST = "https://api4.pudelek.pl/4";

  articles = (page: number = 1, limit: number = 10) => {
    return fetch(`${API.HOST}/articles/${page}/${limit}?s=pudelek.pl`, {
      Origin: "pudelek.pl",
    }).then(response => {
      return response.json();
    });
  };
}
```
