BDD (rspec)

```javascript
import { expect } from 'chai'
import API from '../../../app/networking/api'
import fetch_mock from './mock'

describe('API', () => {
  it('Should properly create query from parameters', () => {
    expect(API.createGETParameters({foo: "bar"},
                                    {lorem: "ipsum"},
                                    {intval: 15},
                                    {special: "!@#$%^&*()-+?"})).to.equal('foo=bar&
    lorem=ipsum&intval=15&special=!%40%23%24%25%5E%26*()
    -%2B%3F')
  })
})
```

flowtype

```js
/*
 * @flow
 */
'use strict'

import ArticleDataModel from '../data-models/article-data-model'
import DatabaseRepository from './database-repository'
import RemoteRepository from './remote-repository'

export default class ArticleDataRepository {
  databaseRepository: DatabaseRepository
  remoteRepository: RemoteRepository

  async get(id: string): Promise<ArticleDataModel> {
    let article: ArticleDataModel = await this.databaseRepository.get(id)
    article.fetch = async (): Promise<ArticleDataModel> => {
      return await this.remoteRepository.get(id)
    }

    return article
  }
}
```
