FancyManager.kt ✕

```kotlin
package pl.wp.wdi

import com.facebook.react.bridge.ReactApplicationContext
import com.facebook.react.bridge.ReactContextBaseJavaModule
import com.facebook.react.bridge.ReactMethod

import android.util.Log

class FancyManager(reactContext: ReactApplicationContext): ReactContextBaseJavaModule(reactContext) {
    override fun getName(): String {
        return "FancyNativeModule"
    }

    /*
    GW: Manager class must have at least one method to be visible as
    NativeModule!
    */
    @ReactMethod
    fun saySomething(message: String) {
        Log.d("TAG", message)
    }
}
```
