Client: curl query

```
~ » curl -s -X POST http://37.233.102.67:5000/graphql \
-d "query={ articles(cid:0, t: [Article, Gallery], limit: 1, offset: 20) { id title img { url } } }" | pp_json
{
    "data": {
        "articles": [
            {
                "id": "QA7Nt2ZukNpAFvQNbEhB3w==",
                "title": "Taylor Swift zarobiła ponad dwa razy więcej od Adele ",
                "img": {
                    "url": "https://i.wpimg.pl/1000-667/CSM//d.wpimg.pl/2726843--394934236_taylor-swift-grammy.jpg"
                }
            }
        ]
    }
}
```

Client: URLSession task

```swift
let body = ["query" : "{ articles(cid: 0, t:[Article]) { title url img { url b64 } } }"]

let url = URL(string: "http://37.233.102.67:5000/graphql")!
let request = NSMutableURLRequest(url: url)

request.httpBody = try? JSONSerialization.data(withJSONObject: body, options: [])
request.httpMethod = "POST"
request.addValue("application/json", forHTTPHeaderField: "Content-Type")

let session = URLSession(configuration: URLSessionConfiguration.default)
let task = session.dataTask(with: request as URLRequest) { (data, response, error) in
    // Do everything here
}

task.resume()
```
